

Maxell is pleased to announce the addition of the Zinc Air batteries into their battery line up.

Available in the four sizes, these batteries are suitable for most hearing aids that use disposable batteries including wireless models (those that connect to smart devices).

The Zinc Air batteries are designed to be inactive until the sticker is removed and air enters the holes to mix with zinc. This activates the battery. Once peeled, there is no going back so use the sticker on a calendar to see when you last changed the battery. It is recommended not to peel the sticker until needed.

This kind of battery follows an “all or nothing” principle. Hearing aid batteries are designed to work at full power until you get a low battery warning, then they stop entirely and need to be replaced and the old ones disposed of in a responsible manner.

So, why choose Maxell Zinc Air?

- Long life batteries that have a high and stable voltage level.
- High quality to ensure reliability
- User friendly packaging design
